Public Service Commission

I am writing in reference to Docket No. 2009-489-E concerning all of the rate hikes. If things are so bad then you need to take a pay cut or lay people off and let them struggle like all the others with little or no income. You already have made an increase that increases each year. Now you want another one. Maybe you need to harness the wind or water flow from Lake Murray for cheap power. Go down and live with the homeless on a park bench for a week and see how the poor survive. Every utility wants to increase rates. You need to cut back on expenses. No more office parties

it the customers expense.
I have no job but I help
to support the homeless
every week. These higher
rates are taking away
money that we can use
to help others as well
as our own living expenses
Thanks

David Crattes
