public in SC. I see nothing good for SC in this "Modernization" Plan.

Please ask yourself if this substation was to be built adjacent to your home or your property, would you permit it?

Thank you for your diligence in your decisions. Please vote no to the substation and lines from Campobello.

Sincerely,

Cornelia Alexander

Dear Chairman Hall,

Thank you very much for coming to Landrum High and listening to our concerns about the Campobello substation and transmission lines. After hearing all the testimonies I am even more convinced that the substation and lines do nothing but damage SC for the sake of Duke Energy NC and future energy sales to other areas not in SC.

My understanding of the PSC is that you look after the good of the

Dear Mr. Elam,

Thank you very much for serving as a Commissioner on the PSC.

After attending the meeting in Landrum, hearing all the testimonies and reading everything I can about substations, transmission lines and Duke Energy, I am very convinced SC does not need this giant substation or new lines.

The substation in Campobello and lines would scar our beautiful area for the sake of NC. As a commission charged with looking out for the good of South Carolina, you must vote no to permitting the substation or lines.

Please ask yourself this question: If the giant substation or giant transmission lines were going to be built next to your home or property, would you permit it?

Thank you,

Cornelia Alexander

Dear Mr. Howard,

Thank you very much for serving as a Public Service Commissioner for SC. After hearing testimonies at Landrum High and reading everything I can about substations, transmission lines, Campobello and energy needs in the next 10 years, I am more convinced than ever that SC does not need a giant substation in SC or 45 miles (or less) of transmission lines.

The substation & lines will scar SC even more for the benefit of NC.

Please ask yourself this question; if this substation & lines were to be
