Public Service Commission

I am writing in reference to Pocket No. 067-489. E. concerning all of the rate hikes. If things are not bad then you need to take a pay cut or lay people off and let them struggle like all the others with little or no income. You already have made an increase that increases each year. How you want and the way. Maybe you need to harness the wind or water flow from Lake Murray for cheaper power. No doubt and work with the house gas on a park bench for 9 weeks and see how the power survive. Every utility wants to increase rates. You need to cut back on expenses. No more office parties.
I have no job but I help to support the family by every week. These higher rates are taking away money that we can use to help others as well as our own living expenses.

Thanks

David Creider
